Additional Ordering Information:

We understand how scarce resources can be for educational software purchases so we have structured our software packages to provide the lowest possible pricing options and highest value. Think about it, if you purchase a site license of one of our software titles, the price can be as low as \$10.70 to \$26.57 per computer (depending on title). And this is for quality educational software that one can use for weeks of lessons and learning instead of for a single day or two!

The network price (NW) is a multi-computer software license for a CD that one can use to install the software on the number of computers allowed by the license. The network license provides the lowest pricing option for multiple computers but will only work on either the Macintosh or Windows operating systems -- you need to pick which system you need on the order form. Installation of the program for the network version is simple to do (4 MB). The Hybrid multi-computer CD option is for the number of Hybrid CD's provided to be used at a single site. The Hybrid CD-ROM's provide the most convenience to use and move between labs and classrooms because they will run on either Macintosh or Windows operating systems without having to do any installations. If one wishes to include a hybrid CD-ROM as part of the network license package, you may purchase an additional Hybrid CD-ROM for \$10.00 so that you have one you can move between school and home.

If you need a disk version we can still provide you with a software version you can install from disks. Keep in mind that the disk version does not include any of the movie clips, has fewer graphics, may not have all the lab plans, and may have to be an older version. Contact Seeds Software if you have older computers and need a version that will run on your computers.
